Allowable Subject Matter

1. The present is directed to a device and a method which prioritizes test signals based upon achievable data rate to a downlink terminal. Next transmissions of the test signal scheduled to the terminal unit based upon their priority.

The closest prior art is Sumner (U.S. Patent No.: 6,091,947). Sumner teaches: a base unit sends test signals to a handset or downlink terminal. The down link test signal is used by the handset to determine an achievable data rate for a message reception.

The closest prior art Sumner (U.S. Patent No.: 6,091,947) does not anticipate, disclose, or render obvious the following claim limitations:

“prioritization unit adapted to assign a priority to each downlink transmission test signal sent to a terminal unit based on an achievable data rate associated with each test signal; and an authorization unit adapted to schedule transmissions to the terminal units based on the priority of the test signal” as claimed in claim 13.

“sending a downlink transmission test signal to terminal units; assigning a priority to each transmission test signal based on an achievable data rate associated with each test signal; and scheduling transmissions to terminal units based on the priority of the transmission test signals” as claimed in claim 29.

In Addition:

Claims 1-4, 7-8, 14-15, & 17-18 are allowed because they depend upon claim 13.

Claims 19-24 & 30-31 are allowed because they depend upon claim 29.

Conclusion

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert W. Wilson whose telephone number is 571/272-3075. The examiner can normally be reached on M-F (8:00-4:30).
